Art Unit: 2833

1. The proposed drawing corrections, filed June 27, 2003, are approved by the examiner. These drawings are not seen to be formal drawings because they do not match the format (they are a different size) of the earlier filed set and cannot be inserted thereinto. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

2. The disclosure is objected to because the specification includes excessive discussion of features such as the cabinet, truck, etc. that are not the subject of the presently claimed invention. Contrary to applicant's assertions, the excessive description of the other components does not provide context and establish the environment. Although a general description of the entire device might be helpful, the detailed description of the features is not required. Further, the copending applications (which should be referenced in the present specification) and rights to file future applications are not relevant to the issue of what is appropriate for the specification describing the presently claimed apparatus.

Applicant suggests that there are no rules or other restrictions on the length or content of the disclosure. However, while the disclosure may be of any length, it is limited in content. As required by 37 CFR 1.71, "the specification must set forth **the precise invention** for which a patent is solicited" (emphasis added). This requirement limits the disclosure to the subject matter of the invention. The present disclosure includes detailed description for many more inventions than that of the present application. It is suggested that these other inventions are nonessential subject matter may be better represented if incorporated by reference.

Appropriate corrections are required.

Art Unit: 2833

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claim 8 remains rejected under 35 U.S.C. 102(b) as being anticipated by Swindler, et al. (see Fig. 1). This controller comprises a means for disconnecting 112, a means for illuminating the switch 122 and a means for racking 118, 120.

Applicant argues that "Swindler does not disclose a disconnect switch associated with the circuit breaker" and therefore also does not disclose a "means for illuminating a disconnect switch." She apparently does not agree with the examiner in considering the "circuit breaker 112" to be the disconnect switch. However, the difference between the circuit breaker 112 of Swindler and the disconnect switch of the present invention is merely semantic. (It is noted that the structure of the switching means is shown in more detail in US Patent No. 4693132, which is incorporated by reference by Swindler). The arrangement indicated by 112 includes contacts, switch blades, etc. that are shown as the means for disconnect switching in Fig. 22, for example, of the present application. This switching mechanism is seen to be the equivalent of the "means for disconnect switching" in claim 8. "That is, the prior art element performs the function specified in the claim in substantially the same manner as the function is performed by the corresponding element described in the specification." (MPEP 2184)

It appears from applicant's remarks, which refer to paragraphs 53-63 of the present specification, that applicant may consider the fuses, fuseholders, shroud, etc. to be part of the means for disconnect switching. However, these parts perform other functions (for example, as stated in paragraph 53, "the fuses "provide overcurrent protection") and do not provide the switching function.

Art Unit: 2833

Applicant has not shown why the switching means of Swindler is not equivalent to the corresponding elements of the present invention.

5. Claims 1-7 are allowed. The prior art fails to show or teach a controller comprising three castings and a housing arranged as claimed.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
